NEW!! Silver Diamine Fluoride (SDF) Authorization

A new dental treatment to fight cavities!

BENEFITS OF SDF: Dental cavities are common in children, but now our dentists have a safe, painless alternative to traditional cavity drilling procedures called Silver Diamine Fluoride (SDF). SDF is an FDA-approved antibiotic liquid used to help prevent cavities from forming, growing, or spreading to other teeth. The dentist simply brushes SDF on teeth.

Reasons to avoid SDF treatment: silver allergy, history of mouth sores, or painful sores on the gums.

Alternatives

- * No treatment: The tooth may continue to decay and cause pain.
- * SDF treatment may not eliminate the need for a traditional filling.
- * Other options: fluoride varnish, a filling or crown, or extraction of the tooth.
- * It's normal for SDF to stain the cavity brown or black, it means it's working.
- * The healthy parts of the tooth will not be stained.

Risks

- * SDF can cause temporary staining if it comes into contact with skin. The stain is harmless and should disappear in less than a week.
- * SDF may cause a temporary metallic taste.

Before SDF

After SDF

Consent for SDF Treatment

I certify that I have read and fully understand the information for the proposed SDF application(s), or I had discussed this with my dental care provider and have had my questions answered. I understand the possible risks associated with SDF treatment and verify that I have no (or the patient I am representing has no) contraindications for its use. I consent to SDF application.
